

DUST ELIMINATOR

Dust Control for Gravel Surfaces

WHAT CAN DUST ELIMINATOR DO FOR YOU?

Dust Eliminator helps stabilize road surfaces and reduces expensive maintenance such as frequent blading and gravelling. For surfaces in poor condition, blading and compaction may be required to obtain optimum results.

We can provide these services to you if needed

Dust obscures vision, penetrates homes, covers vegetation and stunts crop growth. Dust is a common cause of allergies and hay fever. Eliminating dust results in less wear and maintenance on engines and electronic equipment.

DUST ELIMINATOR FACTS

Is it safe? Chloride is as safe as everyday table salt.

How long does it last? Dust Eliminator generally lasts between 6 to 12 months.

How does it work? The applied chloride solution absorbs and retains moisture from the air to stabilize the soil and control the dust.

In tests performed by the Army Corps of Engineers on airstrips and tank trails, chloride was proven to be "the most economically known product for controlling dust." There was also a 70% reduction in blading and gravelling send during these tests.

When applied to unpaved roads, Dust Eliminator keeps road surfaces damp enough to stay dust free even in high temperatures and low humidity.

DUST IS TROUBLESOME FOR:

- Lakeside Homes
- Rural Acreages
- Industrial Lots
- Parking Lots
- Feed Lots

EQUIPMENT

We have the right equipment to apply the Dust Eliminator to large or small areas. Our storage tanks hold 100,000 gallons of solution. We schedule frequent shipments of product.

WHY THE DUST ELIMINATOR?

- Control fugitive dust problems
- Stabilize road surfaces
- Reduce maintenance
- Help everyone breathe a little easier
